EXPERIENCE

Datadog

Aug. 2023 – Present

Software Engineer I & II, Dashboards Frontend Team

New York, NY

- Primary frontend engineer on the AI dashboard and widget creation feature that enables users to create and modify dashboard widgets through natural language with the Bits AI agent. Built the frontend experience end-to-end, including integration with platform-wide agent, state provider architecture, widget rendering, client tool calls integration, and accept/reject workflows. Collaborated with the Bits AI agent team to develop the cross-team tooling that enables the agent to read and update the frontend UI state, as well as with designers to iterate on an intuitive AI user experience.
- Technical lead of multiple Dashboard initiatives and features – template variable redesign (dashboard graph query filters), report scheduling UI, group by template variables widget interpolation, nested group widgets
- Own the lifecycle of feature development – conduct initial explorations and build prototypes, flush out implementation complexity, delegate responsibilities among engineers and consistently ship maintainable code, lead weekly alignment and feedback iteration with designers and PMs, track production rollout with analytics dashboards and monitoring

Datadog

Jun. 2022 – Sep. 2022

Software Engineer Intern, Dashboard Features Team

New York, NY

- Built from scratch and launched an industry-standard, reusable Select component using React, Typescript, and Redux
- Implemented essential features for the Select such as filtering values from the API on text input change, feasible modification of previously selected values, flexibility with a user-creatable option, and keyboard navigation support
- Significantly improved and modernized the UI workflow of configuring Dashboard template variables by collaborating with product designers to discuss trade offs of design decisions and prototype the isolated component using Storybook

Wish

Jan. 2022 – Mar. 2022

Software Engineer Intern, Merchant Web Infrastructure Team

Remote, CA

- Contributed to migration of the merchant frontend codebase from the monolithic structure to a deployment of a NextJS microservice in order to improve tooling and reduce time to compile and deploy local changes for engineers
- Designed codemod scripts utilizing the jscodeshift library that parses the AST node structures in each file to remove deprecated API toolkit dependencies and ensure imports and declarations migrate over smoothly

UCSB Rocket Propulsion Laboratory

Jan. 2021 – Sep. 2021

Software Developer, Avionics Team

Santa Barbara, CA

- Led development of the TVC Telemetry Application project by directing UX research with 30+ engineers to create an efficient UI, drafting a Figma wireframe prototype, and building out the functionality with ReactJS and Electron
- Established radio communication with the TVC rocket by utilizing radio transceivers and STM32 microcontrollers that integrate with the serialport and socket.io software libraries to accurately process real-time data

UCSB Marine Science Institute

Nov. 2020 – Jun. 2021

Undergraduate Researcher, Washburn Lab

Santa Barbara, CA

- Developed a web application by utilizing NodeJS to display ocean surface current vectors along the California coastlines
- Integrated real-time ocean current velocity (RTV) map overlays with the Google Maps and HF-Radar Maps APIs to present comprehensive data at specified coordinates, and manipulate vector overlay features

EDUCATION

University of California, Santa Barbara

Graduated Jun. 2023

- B.S. Computer Science | GPA: 3.83 | Dean's Honors
- Relevant Courses: Data Structures and Algorithms, Object Oriented Design, Full-Stack Web Applications, Human Computer Interaction, Computer Architecture, Discrete Mathematics, Multivariable Calculus, Probability Theory

SKILLS & INTERESTS

LANGUAGES: Proficient in JavaScript, Typescript, HTML, CSS; Experienced in Python, C++, C, Java

TECHNOLOGIES: React, Redux, Node.js, frontend development (yarn, vim, VSCode, GitHub)

EXTRACURRICULARS: Theta Tau Professional Engineering Fraternity, Society of Women Engineers, UCSB Club Tennis, Guitar
